

Technology in Classrooms— **Determinants** and **Consequences** of Technology Integration

Ronny Scherer

Fachtagung IWM #Learnmap
Tübingen, 12 October 2018

2018

Digital literacy

Open Source learning

(Heick, 2015)

2018

2020

Cloud-Based Education

Entrepreneurial learning

2018

2020

2024

Learning simulations

Personalized learning algorithms

Games in Education

A video game controller with red lights is shown in the background, resting on a dark surface. The controller is a DualShock 4, and its light bar is illuminated with red light. The background is dark and out of focus.

Mayer (2019) Ann Rev Psych

Asking the right questions

Using appropriate methods

**Linking evidence, practice,
and theory**

**“Less advocacy and a better linking
between claims and evidence”**

(Mayer, 2015, Educational Psychologist, p. 350)

A person wearing a red and blue plaid shirt is seated at a wooden desk, gesturing with their hands. In the background, another person is blurred. On the desk, there is a laptop displaying a dashboard with various charts and graphs, an open notebook, and a black smartphone. The scene is set in a professional or educational environment.

The Forgotten...

Debunking myths...

Challenging claims...

The Forgotten...

```
81 <Link href={file} to={name} target="_blank">
82 </Link>
83 </div>
84 </div>
85 </div>
86 </div>
87 </div>
88 {showCode ? (
89   <div>
90     <Editor code={code} onChange={handleChange} />
91     <button type="button" onClick={handleHideCode}>
92       Hide code
93     </button>
94   </div>
95 ) : (
96   <button type="button" onClick={handleShowCode}>
97     Show code
98   </button>
99 )
100 </div>
101 </div>
```

Technology in Education

Technology is just a tool. In terms of getting the kids working together and motivating them, the **teacher** is the most important.

Technology Acceptance

Behavioral intention (BI)
Technology use (USE)

**Outcome
variables**

Key factors

Perceived ease of use (PEOU)
Perceived usefulness (PU)
Technology attitudes (ATT)

**Mediating
variables**

(Davis, 1989, MIS Quarterly)

Technology Acceptance

Key factors

Technology self-efficacy (TSE)
Subjective norm (SN)
Facilitating conditions (FC)

**External
variables**

Technology Acceptance

Effects

Between-sample variation in effects

Technology acceptance

Behavioral intentions

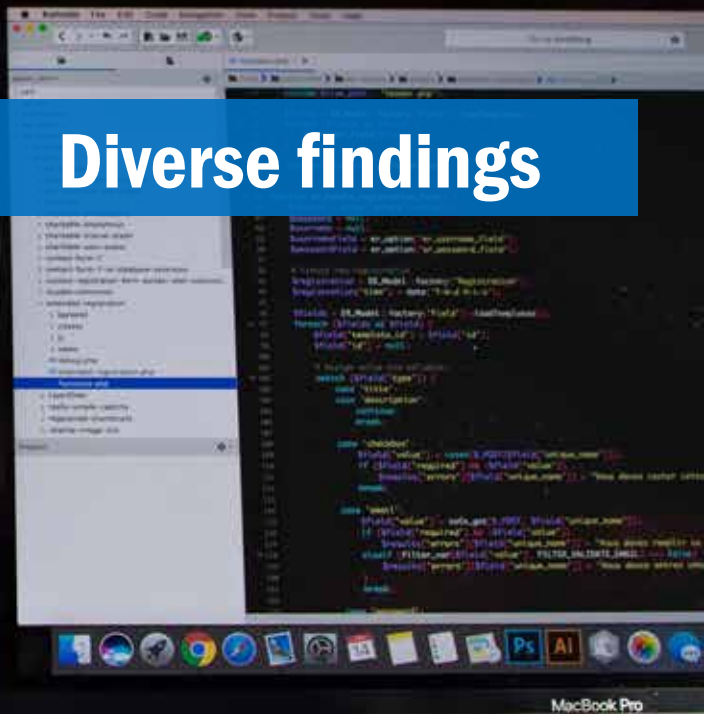

Technology use

?

Direct effect on tech use
BI-USE link

Diverse findings

(King & He, 2006; Schepers & Wetzels, 2007, Inf & Man)

Meta-Analysis

Method

Scherer et al. (2019) Comp & Educ

**Initial search
(n=2239)**

**Initial screening
(n=1826)**

**Fine screening
(n=363)**

**Coding
(n=114)**

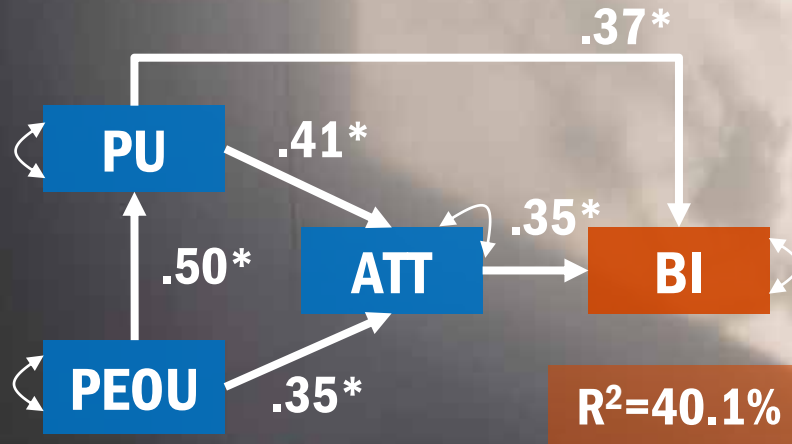

Teacher samples
Quantitative, > 2 variables
Positive definiteness

34357 teachers
1098 correlations
124 corr. matrices
8 TAM variables

Technology Acceptance Model

Effects of mediators

Results

Positive and significant effects on use intentions

Model fit

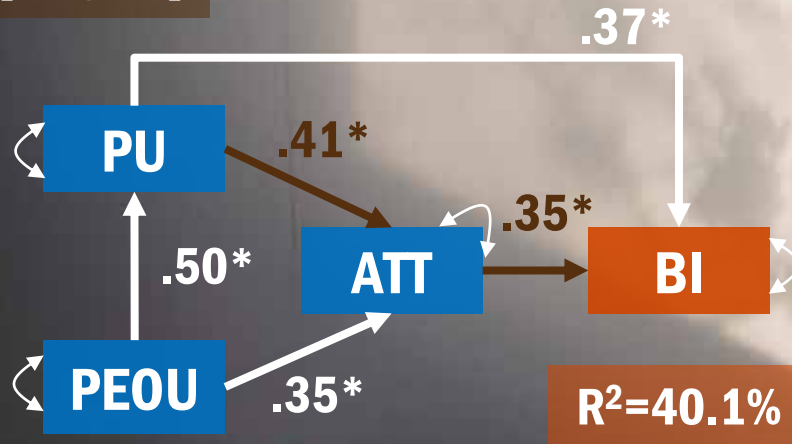

$\chi^2(1)=13.9$, $p<.01$, CFI=.982, RMSEA=.019

Technology Acceptance Model

Effects of mediators

Indirect effect

$B = .14$, 95% CI [.11, .18]

Results

Positive and significant effects on use intentions

Model fit

$\chi^2(1) = 13.9$, $p < .01$, CFI = .982, RMSEA = .019

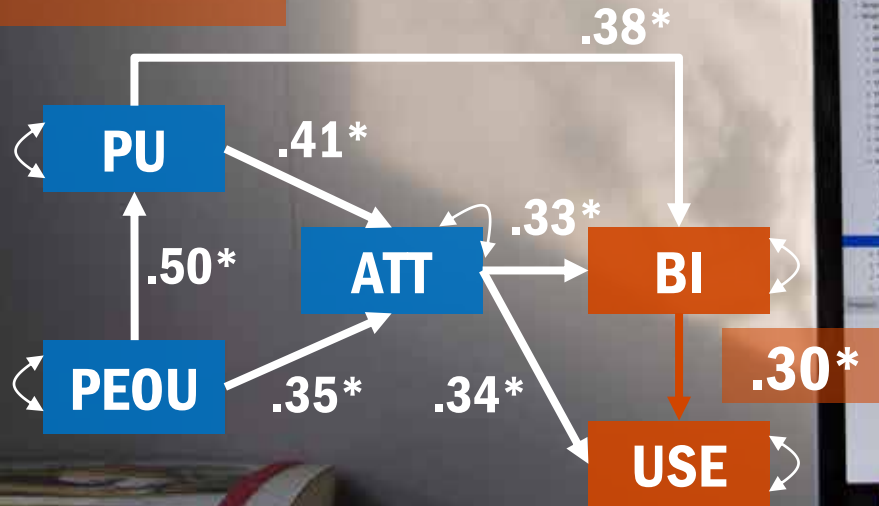

Technology Acceptance Model

The BI-USE link

Moderation by experience
and technology

In-service
 $B = .24^*$
Pre-service
 $B = .40^*$

General
 $B = .45^*$
Specific
 $B = .24^*$

$R^2 = 31.1\%$

Model fit

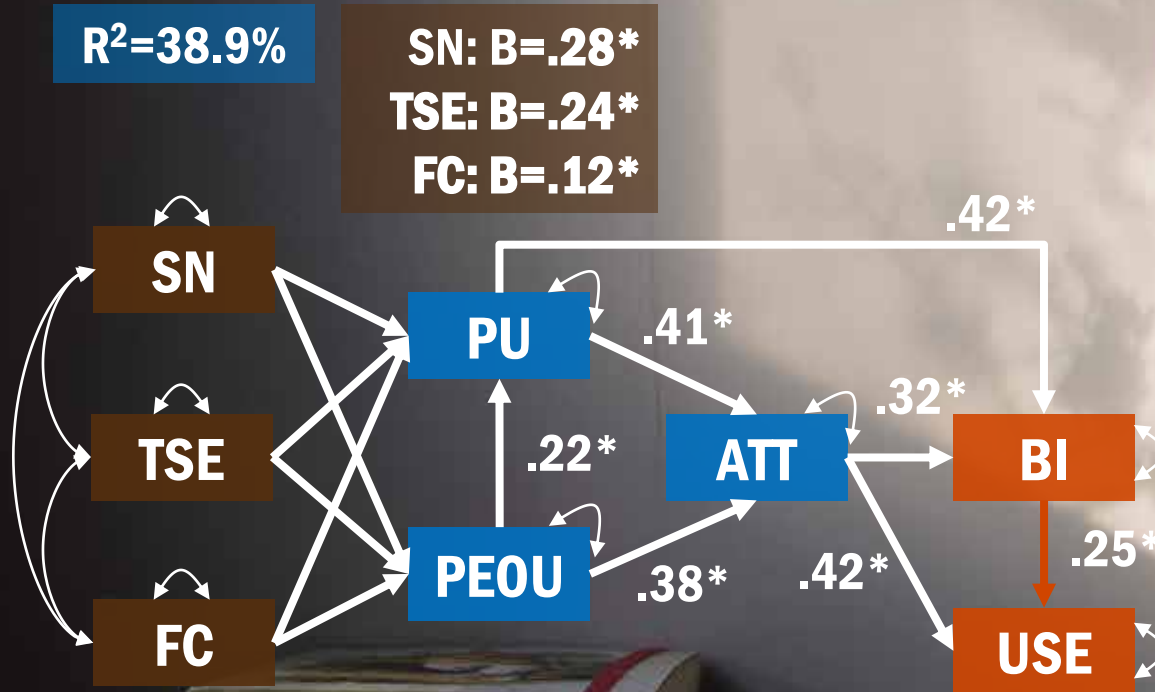

$\chi^2(3) = 19.6, p < .01, CFI = .996, RMSEA = .016$

Results

Positive and
significant link
between intentions
and use

Technology Acceptance Model

Results

Positive and significant effects of external variables

Model fit

$\chi^2(12)=129.8, p<.01, CFI=.982, RMSEA=.017$

So what?

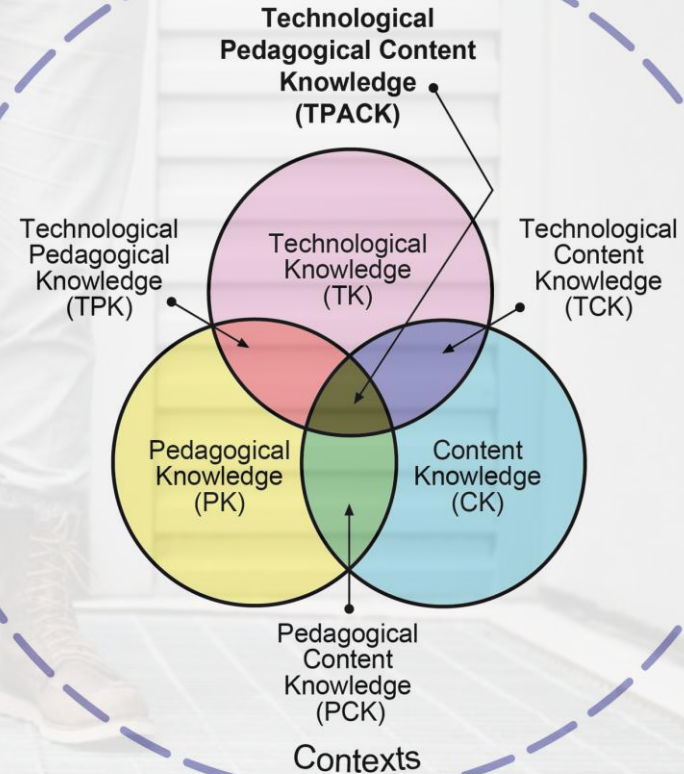

Complexity

Importance of beliefs

Weak BI-USE link

What's next?

TPACK (Mishra & Koehler, 2006)

A dark, textured background featuring a heavy metal chain with eagle-shaped links. The chain is draped across the frame, and a padlock is visible on the right side. The overall tone is dark and mysterious.

Debunking myths...

Myth#1

Collaborative learning with technology is more effective than individual learning.

Computer programming

**Umapathy & Ritzhaupt
(2017)**
 $g=+0.41-0.64$

**Meta-analysis of pair
programming**
 $m=18, k=18$

**Scherer, Siddiq et al.
(in press)**
 $g=+0.67$ (collab.)
 $g=+0.53$ (ind.), $p=.14$

**Meta-analysis of
programming instruction**
 $m=139, k=375$

Myth#2

Visual tools facilitate learning better than text-based tools.

Computer programming

**Scherer, Siddiq et al.
(in press)**

$g=+0.58$ (visual)

$g=+0.63$ (text)

$g=+0.40$ (mixed), $p=.38$

**Meta-analysis of
programming instruction
 $m=139$, $k=375$**

Challenging claims...

Everybody in this country should
learn how to program a computer...
because it **teaches you how to think.**

```
81. <Link href={file} to={pathname} replace={true} />  
82. ) : {  
83.   <Link href={file} to={pathname} replace={true} />  
84. }  
85. )  
86. </div>  
<Preview code={code} eval={eval} />
```

Learning to write programs **stretches your mind**, and helps you **think better**, creates a way of thinking about things that I think is **helpful in all domains**.

Computational thinking

Kindergarten

Secondary school

Higher education

Educational level

$Q_M(3)=2.2, p=.55,$

$R^2=0.0\%$

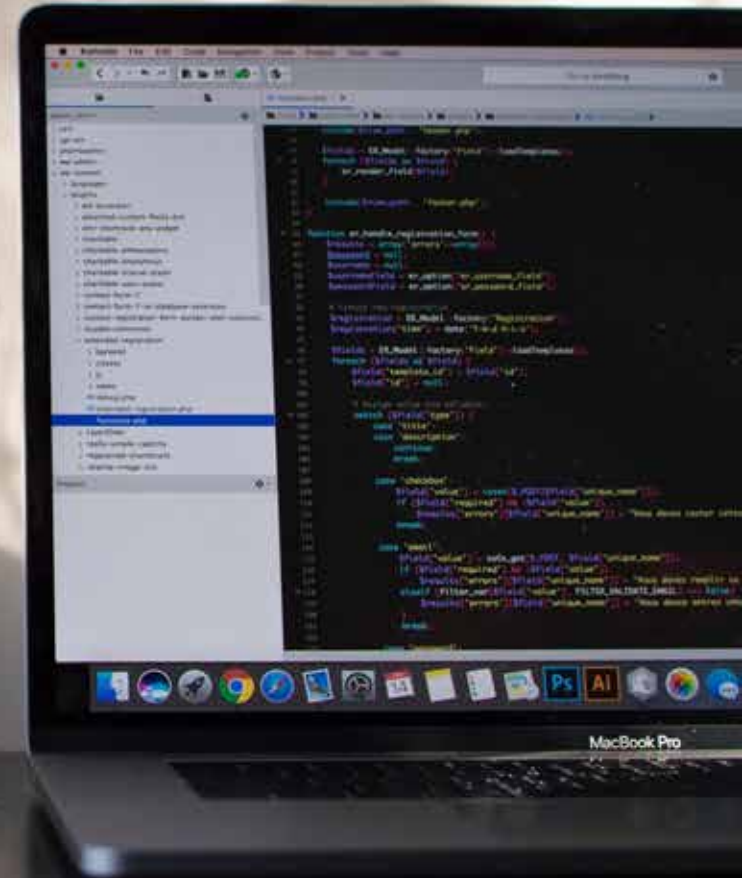

Study sample

* $p < .05$

Issues

Study designs

- **Lack of baseline measure**
- **Treated vs. untreated controls**
- **Pre- and post-measures**
- **Measurement issues**

So what?

Positive transfer effects
Creativity & problem solving
Need for *good studies*

In essence...

Replicate

Analyze

Contextualize

Explain

Integrate

Asking the right questions

Using appropriate methods

**Linking evidence, practice,
and theory**

Mayer (2019) Ann Rev Psych

**“Less advocacy and a better linking
between claims and evidence”**

(Mayer, 2015, Educational Psychologist, p. 350)
